

Raya Attendance — Web Dashboard Guide

First-time setup, daily routine and troubleshooting for HR and managers

The web dashboard is where HR, administrators and managers run the attendance system: add employees and workplaces, approve phones, review suspicious check-ins and download reports. Employees do not use it: they only use the **Raya Attendance** phone app.

Address: **<https://raya.34.35.174.159.nip.io>** · works in any modern browser (Chrome, Edge, Safari, Firefox) on a computer.

Who sees what

Role	What they can do in the dashboard
ADMIN	Everything, including security settings, data retention and the audit log.
HR	Everything for daily work: employees, workplaces, phones, review, holidays & leave, reports, settings.
MANAGER	Their own team only : today's attendance, history and reports of the people they manage.
EMPLOYEE	No dashboard access. They check in with the phone app.

1. Log in the first time

1. Open **<https://raya.34.35.174.159.nip.io>** and enter your email (or employee ID) and the temporary password HR or IT gave you.
2. The dashboard asks you to **choose your own password** (at least 10 characters, not your name or email). Keep it private.
3. After 5 wrong passwords the account is locked for 15 minutes. Forgot it? Another HR user or the admin uses **RESET PASSWORD** on the Employees page.

2. First-time setup – do it in this order

Each step needs the one before it (a workplace needs a branch and working hours, an employee needs a workplace...).

- ☐ **Branch** – **Locations & departments** → tab **BRANCHES** : at least one, e.g. *Head office*.
- ☐ **Working hours** – tab **WORKING HOURS** : e.g. *Standard 09:00–18:00 Mon–Sat*, with the grace minutes (how late someone may arrive before counting as *late*; default 15).
- ☐ **Workplaces (locations)** – tab **LOCATIONS** → **ADD LOCATION** : name, short code, branch, the exact position of the entrance, radius and time zone (see the box below).
- ☐ **Departments** – tab **DEPARTMENTS** : e.g. *Sales, Finance, HR*.
- ☐ **Managers first, then employees** – **Employees** → **ADD EMPLOYEE** . Create the managers first so you can choose them as the manager of the others. Choose each person's check-in workplace(s); the dashboard gives you their temporary password.
- ☐ **Holidays** – **Holidays & leave** : add this year's public holidays so nobody is counted absent on them.
- ☐ **Phones** – when people log in to the app the first time, approve their phones in **Phones** .
- ☐ **Optional**: scheduled reports, office QR screens, security rules.

Getting the workplace position right (most common mistake)

1. In Google Maps, find the office and **right-click the entrance** of the building.
2. Click the two numbers at the top of the menu – they are copied (e.g. 6.613119, 3.344065).
3. Paste them into the **Latitude** box: the dashboard fills Latitude and Longitude automatically.
4. **Radius**: 100–200 m suits most offices (between 10 and 5000).
5. **Time zone**: the city of the office, written exactly like Africa/Lagos or Africa/Cairo (not the server's time zone).

If check-ins show a distance of kilometres although people are at the office, the position of the workplace is wrong – edit it.

3. Adding an employee

1. **Employees** → **ADD EMPLOYEE** .
2. Fill in **Full name**, **Employee ID** (what they type in the app, e.g. EMP-0101), work email, phone (optional), **Role** (Employee, Manager, HR, Admin), department and manager.
3. **Check-in locations**: the workplaces where this person may check in – the first one is their main workplace.
4. Click **CREATE** . The dashboard shows a **temporary password – only once**. Copy it and give it to the employee privately together with their employee ID. The app makes them choose their own password at the first login.
5. The employee installs **Raya Attendance** from Google Play and logs in.

4. Approving a phone (once per employee)

For security, each employee can only check in from **one approved phone**, and one phone can belong to only one employee. After the first login the app shows *waiting for HR approval*.

1. Open **Phones** → tab **WAITING FOR APPROVAL**.
2. Check that the name and phone model are right (ask the employee if unsure) and click **APPROVE**.
REJECT if you don't recognise the request.
3. The employee taps *Check again* in the app – the CHECK IN button turns green.

New phone or reinstalled app = a new approval. Approving the new phone switches off the old one automatically.

5. Your daily routine (5 minutes)

When	What to do	Where
Morning (after 09:30)	Look at who is present, late, absent or still missing.	Dashboard , Attendance
Morning	Approve or reject flagged check-ins from the previous day.	Suspicious activity
Whenever someone is new or changed phone	Approve the phone.	Phones
When someone is on leave	Record the leave so they are not counted absent.	Holidays & leave → LEAVE
Daily / weekly / monthly	Download the reports (or let them be prepared automatically).	Reports , Scheduled reports
Weekly	Check open security alerts.	Security monitoring

6. Reviewing a flagged check-in

When a check fails (for example the phone was outside the office radius, or a fake-GPS app was found) the check-in is **flagged**: it is saved but **does not count** until HR decides. The employee only sees *waiting for HR review*.

1. [Suspicious activity](#) → [WAITING FOR REVIEW](#) and click a row.
2. Read the **Checks** (what passed and what failed), the distance and accuracy; [Open position on map](#) shows where the phone was.
3. [Approve – counts as attendance](#) if the person really was at work, or [REJECT](#) with a short note.

APPROVE – COUNTS AS ATTENDANCE

REJECT

Review a flagged check-in

Every decision is saved with your name in the **audit log**. You cannot review your own attendance.

7. Reports

- **Create a report** ([Reports](#)): choose the type (daily, weekly, monthly, late arrivals, absences, suspicious attendance or a custom period), the date and optional filters, then [DOWNLOAD EXCEL](#) or [DOWNLOAD PDF](#) .
- **Ready reports**: reports prepared automatically by your scheduled reports, ready to download – also available to managers and HR in the phone app.
- Managers only ever get their own team.

8. Troubleshooting

Problem	What to do
Check-ins show a distance of km although people are in the office	The workplace position is wrong: Locations & departments → Locations → EDIT, paste the right coordinates (section 2).
Saving a form shows Some fields are missing or invalid.	The message ends with the field that is wrong, e.g. <i>timezone: unknown timezone</i> . Codes: letters/numbers only, no spaces.
An employee can't press CHECK IN (grey)	Their phone is waiting for approval → Phones. Or they have no workplace → Employees → LOCATIONS.
An employee forgot the password / is locked	Employees → RESET PASSWORD gives a new temporary password.
Someone was counted absent while on leave or a holiday	Record the leave / holiday in Holidays & leave .
A check-in was flagged by mistake	Approve it in Suspicious activity . If it happens often, check the workplace radius or Security settings .
The dashboard says the session expired	Log in again (you are logged out after a period without activity).

Raya Attendance web dashboard · version 1.0 · Screenshots show demo data from a test copy, not real employees. The full list of pages and options is in the separate [Dashboard Options](#) PDF.
